

Appl. No. : 10/714,097
Filed : November 14, 2003

AMENDMENTS TO THE CLAIMS

Please amend the claims as follows:

1-17. Cancelled

18. (Currently Amended) A method of forming a communication,
comprising:

Using a portable communication device with a camera and a display unit therein,
to obtain an image of a bar code ~~that is associated with an advertisement;~~

Using said portable communication device to make a telephone call;

Using said portable communication device for sending information indicative of
the bar code to a remote server ~~database~~; and

receiving and displaying, on said display of said portable communication device,
more information about said advertisement from said remote ~~database~~ server.

19. (Currently Amended) A method of forming a communication,
comprising:

Using a portable communication device with a camera and a display unit therein,
to obtain an image of a bar code ~~that is associated with an item for sale;~~

using said portable communication device to make a telephone call;

using said portable communication device for sending information indicative of
the bar code to a remote ~~database~~ server ;

at a different time than said telephone call or said sending information indicative
of said bar code, using said camera to obtain a video; and

Appl. No. : **10/714,097**
Filed : **November 14, 2003**

receiving and displaying, on said portable device, information ~~that is supplemental to said item for sale~~ based on said barcode, which information is received from said remote ~~database~~ server.

20-27 Cancelled

28. (Previously Presented) A method as in claim 18, wherein said bar code is a dual type bar code, with a first a part that is interpreted by a first bar code scanning process to obtain first information and a second part which is interpreted by a second bar code scanning process to obtain second information that has more information than first information.

29. (Previously Presented) A method as in claim 28, wherein said first part is a linear bar code and said second part is a non-linear bar code.

30. (Previously Presented) A method as in claim 28, wherein said first process is a scan in a first direction and said second process is a scan in a second direction.

31. (Previously Presented) A method as in claim 28, wherein said second part is one of grayscale or color of the bar code.

32-37 Cancelled

Appl. No. : **10/714,097**
Filed : **November 14, 2003**

38. (Currently Amended) A method comprising:
using a portable communication device which includes a camera therein to
obtain an image of a bar code;
using said portable communication device to make a telephone call;
decoding information in the bar code to obtain information from the bar code;
and
using said information as an address to access a web site ~~from~~ using said
portable communication device, said web site being ~~that is~~ addressed based on said
information in the bar code.

39. (Previously Presented) A method as in claim 38, wherein said bar
code is a two-dimensional bar code.

40. (Previously Presented) A method as in claim 38, wherein said bar
code is a three-dimensional bar code.

41. (Previously Presented) A method as in claim 38, wherein said bar
code includes different parts which include different information, one of said parts
including said information to access the web site.

42-47 Canceled

Appl. No. : **10/714,097**
Filed : **November 14, 2003**

48. (New) A method, comprising:

using a portable telephone which includes a camera therein, at a first time to make a telephone call;

using the camera in the telephone at a second time to take a video; and

using the camera in the telephone at a third time to obtain an image of a barcode, to obtain information indicative of the barcode, and to form information on the display of the camera indicative of the information in the barcode.
